

Next: [Introduction](#) Up: [A Practical Introduction to](#) Previous: [A Practical Introduction to](#)

Contents

- [Introduction](#)
- [Simple calculations and graphs](#)
 - [Entering vectors and matrices; built-in variables and functions; help](#)
 - [Graphs](#)
 - [Arithmetic operations on matrices](#)
 - [Standard operations](#)
 - [Solving matrix equations using matrix division](#)
 - [Vectorized functions and operators; more on graphs](#)
 - [Some miscellaneous commands](#)
- [Programming in Matlab](#)
 - [Conditionals and loops](#)
 - [Scripts and functions](#)
 - [A nontrivial example](#)
- [Advanced matrix computations](#)
 - [Eigenvalues and other numerical linear algebra computations](#)
 - [Sparse matrix computations](#)
 - [Creating a sparse matrix](#)
- [Advanced Graphics](#)
 - [Putting several graphs in one window](#)
 - [3D plots](#)
 - [Parametric plots](#)
- [Solving nonlinear problems in Matlab](#)
- [Efficiency in Matlab](#)
- [Advanced data types in Matlab](#)
 - [Structures](#)
 - [Cell arrays](#)
 - [Objects](#)
- [About this document ...](#)
